Financial Summary

Special Thanks

All Out Africa Foundation is a charity registered in 2006 in Eswatini (n° RT/7151).

All contributions are tax-deductible in accordance with Eswatini tax law.

Roki Centre, Main Road
P.O Box 153 Lobamba
Ezulwini, Eswatini

Our priority regions

Eswatini - Mozambique - South africa

The All Out Africa Foundation was established in 2006 by conservationist and social-entrepreneur Kim Roques to achieve his vision of a southern Africa where people and wildlife thrive. It came from humble beginnings in the tiny Kingdom of Swaziland. Since then many others have joined the team and it has grown to implement a variety of important projects across southern Africa from Cape Town in South Africa to Tofo in Mozambique.

Our team seeks a win-win for people and the planet. Our projects change lives in Eswatini (Swaziland), Mozambique and South Africa to elevate the well-being of people and wildlife.

The All Out Africa Foundation strives towards innovative ideas, effective action, efficient management and exemplary governance. We are a grass-roots non-profit working within communities and biodiversity hotspots to improve education, reduce hunger, alleviate poverty, advance research, strengthen health, promote understanding, enhance ecosystem services and conserve terrestrial and marine biodiversity.

FROM OUR FOUNDER

Kim Roques

“

Our projects have made good progress towards reducing poverty and hunger, improving education, health and wellbeing, climate action and the conservation of terrestrial and marine wildlife.

The previous two years have been immensely difficult for the All Out Africa Foundation. Emerging from the socio-economic devastation of COVID19 there has been a lot to do. At each of our regions of operation across Eswatini, South Africa and Mozambique poverty has increased, education has stagnated, health and wellbeing have stuttered, and even conservation of terrestrial and aquatic biodiversity has suffered in the face of increased poaching pressure and reduced ecotourism revenue for conservation agencies. With limited government resources to meet these growing needs the work of the All Out Africa Foundation has become especially important. 2022 has been a year of progress.

I am extremely proud and inspired by the staff of the All Out Africa Foundation and their work over the past year. It has been such a pleasure to see the excellent progress with our projects. From children filling our care centres, learning, playing and sharing meals, to international and local university students collecting field data, learning, investigating and collaborating at our research centres. From youngsters playing their heart out on the dusty football fields of Lobamba to youth learning about enterprise and starting a business as their doorway to a prosperous future.

From a new ecological experiment to investigate savannah ecosystem changes to a new remote underwater camera system for monitoring reef creatures. It has been so rewarding to get back to all out action. Our projects have made good progress towards reducing poverty and hunger, improving education, health and wellbeing, climate action and the conservation of terrestrial and marine wildlife.

Through these and our broad approach we have also been able to help towards decent work and economic growth, reduced inequalities and towards peace, justice and strong institutions. However, there is still much to do. The challenges of inflation and unrest against the background of COVID19 are likely to hit the poor and vulnerable hardest.

A huge thanks to our donors, partners and supporters for your belief, encouragement, patience and enthusiasm. We literally could not do our work without you. To the All Out Africa Foundation team, I am humbled and honoured to be working with you all towards this worthy vision of a southern Africa where people and wildlife thrive and I can't think of better projects to spend time and effort on than what we are currently doing. I'm looking forward to an inspired and productive 2023 and can't wait to share it with you all.

Kim Roques

**Founder and Chairman
All Out Africa Foundation**

Sustainable Development Highlights

Improved and created new classrooms, gardens, water systems and other physical structures needed at Neighborhood Care Points (NCPs) and community training facilities to facilitate education, innovation and sustainable development.

Improved the wellbeing and health of 235 children & 800 youth through daily sport, play, coaching, competitions & life skills development.

Our Day Care Centres (NCPs) provided two healthy meals a day to over 300 children & established gardens & fruit trees for food security.

Our ecological research in Tofo, Mozambique and Mbuluzi, Eswatini is providing important knowledge for biodiversity conservation, growing local capacity, raising awareness and contributing to responsible tourism for sustainable resource use.

The All Out Africa has enabled the education of over 3500 pre-school children, 853 homework club students and 124 high school students plus many more that it has assisted with. It has also enabled field based training & research for 85 Swazi university undergraduates, 6 Mozambican undergraduates, 18 Swazi MSc students, and 5 Swazi PhD students.

“

Without all of your support we would not be able to do all that we do and we look forward to a even brighter and fruitful future for our NCPs

Eunice Nkambule, NCP & Sponsorship Coordinator

POVERTY ALLEVIATION

All Out Africa launched the Entrepreneurship Project with support from the British High Commission for a Youth Enterprise Training program. The mission of this project is to help create 1000 businesses with youth in Eswatini. We have successfully hosted 3 group trainings of 6 weeks each at our Ezulwini NCP, training a total of 60 youth so far.

We're working closely with the local community leaders in Eswatini (Bucopho) to mobilize the youth and engage them in the project. The training includes financial education, how to market a business, costing and pricing and ends with the writing of a business plan.

We have partnered with financial institutions Eswatini Bank and FinCorp to provide loan funds to entrepreneurs without needing surety. We facilitate the process to make it easier for entrepreneurs to access loan funding.

During the training, the young entrepreneurs had the honour to meet the British High Commissioner Mr Simon Boyden, who has supported the project. We have been very impressed with the engagement of the youth thus far and are excited about the prospects for this project.

As an organization, we believe that entrepreneurship is the only sustainable solution to help address the giant problem of youth unemployment and it will help alleviate poverty with more job opportunities created.

“

I am particularly excited by the desire from All Out Africa Foundation to improve the socioeconomic status of nearby communities. This indeed is a true spirit of corporate citizenship that will challenge other organizations to emulate. The call to create jobs is directed to everyone, even the youth themselves, hence we applaud AOAF for creating this platform where young people test their entrepreneurial acumen.

Mfanukhona Ndwandwe, Enterprise Development Coordinator

HEALTH & WELLBEING

All Out Africa Foundation helps improve the health and wellbeing of vulnerable children and youth in communities through sport, play, competition and life skills development thanks to the support of our long standing partner BOOST.

Over 350 children in our NCPs have been equipped with life skills through our sports development program funded by BOOST. This support has enabled us to strengthen and scale up our sports program significantly and make a positive impact on the lives of more vulnerable children.

Daily sports events at 8 NCPs had the kids running, jumping, weaving & crawling whilst taking part in fun competitive sports activities led by our sports co-ordinators. Covid 19 protocols were followed during this.

Swimming lessons were held for a total of 20 children (10 boys and 10 girls) from Ezulwini and Mvutjini NCPs. The aim is to save lives by teaching pre-school aged children to swim. The lessons build the children's confidence in the water then gets them practicing basic swimming techniques.

This year we were able to host a successful Under 10 soccer tournament for Boys with 14 teams participating.

The All Out Africa team with facilitation from the Lobamba football association were able to host a successful football league for under 13, under 15 and a new under 17 age group. 14 teams participated happy to be playing soccer again, after two years of restriction because of Covid 19. Moreover, soccer league has had some fantastic feedback from the Eswatini National Football Association development department, quoting "All Out Africa has made our job easier by running this annual development league."

All Out Africa with support from BOOST continues to make sports available for those who would not otherwise get the opportunity. We believe that sports can contribute to a healthier and happier society and can help the youth of Eswatini stay away from drug abuse, early pregnancy and criminal activities.

“

My wish is to give every child in the world an opportunity to participate in sports.

BUILD A FUTURE & KHULA TREE PROJECT

The building and repairs of the 8 NCPs supported by All Out Africa all depend on funding from our international volunteers who come each month as well as other stakeholders.

All Out Africa Foundation works under very limited resources thus fully depends on donations. We are hoping to start up with fencing at Lamgabhi Etiyeni NCP as soon as the funds reflect in the hardware stores we have partnered with.

With some of the funds raised by our international volunteers we were able to improve all our NCPs. The play area is one of the most important aspects in a pre-school as children learn through play, so one of our main focus was putting up steel swings as they will only need to be repainted instead of starting them from scratch like the wooden ones we have. Hopefull we will get more funding to fix the wooden swings so that we have more swings at our NCPs for the children to play.

Due to the random heavy winds and storms 7 NCPs were left with broken windows. The funds from the volunteers has made it possible for us to fix all the windows that needed attention. Learning became difficult for the children during winter or cold days and this will be a thing of the past. A water tank was bought for Nkhanini NCP since the one they owned was cracked and leaking. The outside classroom wall was also repainted by the volunteers after it was tempered with during the installing of electricity.

Work is still on going at Elangeni NCP as we fix the kitchen floor to make it nice and smooth with concrete. The cooking lady is very excited as it was difficult to cook during rainy days as it got muddy. A CH2 window frame and ceiling boards were put up at Mvutjini NCP. Without the ceiling bees got the opportunity to make a hive thus putting the children in danger of being stung. At present we are putting up fencing at Mahlanya NCP. This is to help secure the play area so as to prevent trespassers from damaging the equipment set up there.

As we have come to the end of the year, we are optimistic that we will get more funding in order to effectively continue improving the services we provide to the underprivileged children that we work with.

All Out Africa will continue improving the services we provide to the underprivileged children that we work with.

Michael Mkhonta, Building Coordinator

The SRC staff continues with the BROWSE surveys where data from 5 taxa namely Birds, Bats, Large mammals, Small mammals and Vegetation for long-term monitoring. These surveys are conducted from beginning of December to the end of January (which is our wet season) in Hlane Royal National Park and Mlawula Nature Reserve.

A new long term experiment was started at Mlawula Nature Reserve to perform different treatments to understand the impact of Elephants & other herbivores on biodiversity. The treatments range from fencing some plots off as controls, physical shrub damage, playing elephant sounds and adding dung. It is a comparative project with Kruger National Park where a similar one is being implemented. It bodes well for an exciting research future.

The Savannah Research Centre (SRC) was upgraded and improved. Two new decks & luxury safari tents were added as well as 10 new dome tents as well as painting & other improvements. It is now a thriving field research & education centre.

This year we had amazing groups of students, faculty and researchers from the University of East Anglia. They studied Birds, Bats, Small mammals, and insects (mainly dung beetles, butterflies and moths). A Masters' student by the name Christopher Gemelli investigated a Giraffe photo population census.

The SRC hosted young researchers from local and international universities for the IRES project. This year we had 5 American students, 3 EmaSwati students and 2 South African students. They surveyed Hlane Royal National Park, Mbuluzi Game Reserve and Mlawula Nature Reserve to analyse the impact of the experimental treatments on biodiversity.

Muzi Sibiya, a PhD student from the University of Florida looked at bird communities and sociable bird species in Mbuluzi Game Reserve and Mlawula Nature Reserve.

The SRC hosted Masters' students from the University of Wageningen surveying and collecting data on birds, nesting, reproduction, predation. They mostly focussed on sociable bird species including Speckled Mouse birds, Arrow-marked Babbler and Southern Black Tits. They also looked at malaria and its effect on breeding Dark-capped Bulbul.

I feel like there is a need for locals to learn more about conservation and teach others. We hope the SRC will have more locals.

Mduduzi Ngwenya, Savannah Research Center Assistant Coordinator

MARINE CONSERVATION

It has been a busy year at the Marine Research Centre in Tofo with a record 550 humpback whales, 52 whale sharks, 102 turtles, 243 dolphins and 18 leopard sharks observed and recorded by our citizen scientists led by our Marine Research Co-ordinator.

For the first time since 2019, we have welcomed up to 7 new volunteers and interns each month in 2022. We have trained them as citizen scientists and completed 253 survey dives to document the occurrence and behaviour of important and threatened marine animals off the coast of Tofo. 82 ecologically-important reef fish species during the 253 survey dives were identified and recorded to monitor reef health.

135 hours of remote camera footage and 840 hours of humpback whale song from our cutting-edge long-life camera and hydrophones have also been gathered. Most impressively, the critically endangered bowmouth guitarfish (*Rhina ancylostoma*), which we usually record only between 3 and 5 sightings of per year, have been seen 28 times in 2022. These values (which represent only a subset of our vast array of research projects) are providing important ecological information for the conservation of these animals and increasing awareness and understanding of their needs whilst at the same time contributing to sustainable development in the area through education and responsible tourism.

Our field data have been used in Masters, PhD and internationally collaborative research projects, producing more than a total of 30 research publications and many other acknowledgements in scientific papers.

Our research is in collaboration with the Natural History Museum and Eduardo Mondlane University in Maputo, Mozambique. With these organisations we are identifying key conservation questions for marine life and are prioritising future marine research relevant for conservation management in the country. Our research has contributed towards the designation of various ray and shark species in the 'Prohibited from Capture list' for Mozambique in place as of January 2021.

We've hosted and supervised an MSc project on the health of fish stocks of shallow in-shore reefs, including how local fishing activities may be better managed for future health of these. This work is now pending publication. We've strengthened collaborative relationships both in-country, but also internationally.

Our research collaboration with the Universities of Glasgow, St Andrews, Hull, Cape Town, and with SharkLife, Wildlife Conservation Society, Marine Megafauna Foundation (and many more) allows us to use our data of rare and threatened marine wildlife to better safeguard the future of these ecologically-vital species worldwide.

2022 saw a huge leap in species sightings, such as humpback whale and the critically endangered bowmouth guitarfish (pictured). This incredibly promising and we continue to make our observations and publications to document the changing underwater scenery of east Africa's greatest underwater wilderness

Jennifer Keeping, Marine Research Director

COMMITMENT TO SUSTAINABLE DEVELOPMENT GOALS

All Out Africa is committed to the realisation of the United Nations' Sustainable Development Goals (SDGs) for 2030.

1 NO
POVERTY

SDG #1: End poverty in all its forms everywhere.

Our NCPs and projects support a multifaceted approach to ending poverty by supporting vulnerable people at all stages of life. For younger generations, the schools and projects where you volunteer support in feeding, educating, engaging, and providing scholarships for primary to tertiary education. For young adults in Eswatini and Cape Town, we have begun to offer entrepreneurship training and microloans. Our social projects in Cape Town contribute to a network of care centres that assists people with disabilities.

2 ZERO
HUNGER

SDG #2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture.

The 8 Neighborhood Care Points (NCPs) in Eswatini that All Out Africa runs provide two healthy meals to over 300 children/day. The local care center in Cape Town has its own garden and kitchen to provide food to its 20-30 members.

3 GOOD HEALTH
AND WELL-BEING

SDG #3: Ensure healthy lives and promote well-being for all at all ages.

An essential part of a healthy lifestyle is physical activity and being outside. At our NCPs, we help to facilitate fun activities and sports for children. Layered with lessons on a healthy lifestyle, your help is essential to running activities for children who attend our programs.

4 QUALITY
EDUCATION

SDG #4: Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all.

We support each stage of educational development. From 2004 to 2022, our NCPs in Eswatini have provided pre-school education to 3500 children and afterschool tutoring through primary school to 853 students. We've also provided scholarships for 124 students to attend secondary school. Finally, through our Savannah Research Centre in Mbuluzi Game Reserve 85 Swazi undergraduate, 18 MSc, and 3 PhDs have graduated.

8 DECENT WORK AND
ECONOMIC GROWTH

SDG #8: Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

The microfinance program provides a means for Eswati youth to escape cycles of poverty. By helping with training, loan distribution guidelines, and self-evaluation you will help us make the biggest impact possible with the resources we have!

9 INDUSTRY, INNOVATION
AND INFRASTRUCTURE

SDG #9: Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

In the improvement and creation of basic shelters, gardens, water systems and other physical structures needed at households and NCPs, you help build the infrastructure necessary for people to innovate and build industry.

10 REDUCED
INEQUALITIES

SDG #10: Reduce inequality within and among countries

All Out Africa is committed to inviting a representative picture of South African, Swazi, and Mozamican society to take part in all our social programming, meaning equal access irrespective of sex, disability, race, ethnicity, origin, religion or economic or other status.

13 CLIMATE
ACTION

SDG #13: Take urgent action to combat climate change and its impacts.

The contribution to biodiversity and ecosystems research is helping to stem the tide of climate change. From the Marine Research Centre in Tofo, Mozambique to the SRC in Eswatini - from beach clean-ups to tracking animal behaviour - we help scientists understand changes at the ecosystem level, raise awareness of climate change and pollution, and support species to withstand its effects. We endeavour to limit our own impact and pollution.

14 LIFE BELOW
WATER

SDG #14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Our work in Tofo, Mozambique is building a local economy based on sustainable tourism and helping to raise awareness and community support for sustainable resource use. The research we do helps provide a clearer picture of how tourism and industry interact with life on water.

15 LIFE
ON LAND

SDG #15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Our work at the SRC is building a local economy based on sustainable tourism and helping to raise awareness and community support for sustainable resource use. The research we do helps provide a clearer picture of how tourism and industry interact with life on land.

17 PARTNERSHIPS
FOR THE GOALS

SDG #17: Strengthen the means of implementation and revitalise the Global Partnership for Sustainable Development

Problems as complex as those the SDGs are trying to solve take teamwork and networks of people. Your own contribution to our projects and to strengthening community connections helps create a market for pushing these goals into reality, one brick at a time!
